Practice Questions

1. Difference between print and echo construct in PHP.

```
2.
      Write the output of the following code.
      (a)
      <?php
             $num = 12;
             function func()
                    echo $num." ";
                    global $num;
                    echo $num." ";
                    $num = 13;
             }
             func();
             echo $num;
      ?>
      (b)
      <?php
             function func()
                    static $num = 5;
                    while($num >0)
                    {
                          $num--;
                          func();
                    echo $num." ";
             func();
      ?>
(c)
      <?php
      function fun1($a=10, $b= 23)
             $z = $a + $b;
             echo $z;}
             fun1(22);
     ?>
```

- **3.** Match the following
 - 1) require()
- a) resource
- 2) include()
- b) warning
- 3) die()
- c) fatal_error
- 4) fopen()
- d) exit
- 4. Consider the database **CSE** which is having a table **Student(Roll_No, Name, Course, Marks)** as given below.

Student			
RollNO	Name	Course	Marks
1	Alice	DAA	10
2	Bob	TOC	11
3	Jack	CN	11
4	Jill	DAA	12
5	Rita	OS	13
6	Tina	OS	10

Write the PHP script

- (i) To get the second highest marks in the **Student** Table.
- (ii) To get Highest marks in OS.
- **5.** Determine the correct order
 - i) Execute the SQL query.
 - ii) Open a connection to MySql Server.
 - iii) Fetch the data from query.
 - iv) Select the database.
 - v) Close connection.

6. Consider the database named "**Database1**" with table **Employee**(Emp_id, Name, Salary)

Customer			
Emp_id	Name	Salary	
1	Alice	1000	
2	Bob	2000	
3	Jack	3000	
4	Jill	4000	

Write a servlet which updates the salary for the given Emp_id = 2
